

PAPER PALLETS

When shipping your product in full truckload quantities, our Power Pallet™ is an excellent alternative to one-way disposable wooden pallets.

POWER PALLET™

IEI provides this patented shipping pallet for uniformly distributed loads that weigh up to 2,500 pounds. Due to its light weight, this pallet saves on freight costs. Power Pallets™ combine two smooth corrugated decks with vertical cell kraft honeycomb supports. Power Pallets™ are handled like any other pallet with the help of our patented 4-way forklift entry.

Benefits:

- **Clean** - just like a new box.
- **Strong** - many designs can support 2,500 lbs. each, 4-high in warehouse.
- **Lightweight** - typically 7-15 lbs. allowing you to ship up to 2,200 lbs. more product per truckload.
- **Sustainable** - produced with recycled content.
- **100% Recyclable** - bale with other containerboard waste.
- **Export ready** - ISPM 15 exempt for export.
- **Internationally accepted** - meets approved disposal regulations of foreign countries.
- **Safe** - free of nails, staples and splinters.
- **Worker friendly** - one person can easily pick up and move.
- **Custom configurable** - can be designed and manufactured to virtually any form.
- **Flexible** - use as in-house as a slave pallet or ship one-way then recycle.
- **Can be coated** - 100% recyclable non-skid and water resistant coatings are available.

APPLICATIONS

- Animal Feed and Supplements
- Automotive Products (OEM)
- Consumer Food Products
- Consumer Durable Goods
- Furniture
- Industrial Goods & Equipment
- Ingredients (bulk, bagged or boxed)
- Plastic Containers
- Point-of-Purchase Display Bases

PAPER PALLET FACTS

Engineered specifically for each application, Innovative has the ability to design and manufacture a wide range of pallet configurations using many different materials.

Opportunity & Success:

While paper pallets will never replace wooden or plastic pallets, there are many applications where they are perfectly suited. Innovative has four decades of diverse experience designing and manufacturing paper pallets for nearly every market.

Ideal transport environments:

- **Closed Loop Distribution** - This is where your company has complete control over shipments using dedicated or company owned transportation.
- **Full Truckload Distribution** - Only full truckloads are shipped from point A to B without transfers or cross-docking of palletized product.
- **Export Distribution** - When product is loaded into a sea van or container at the point of manufacture. Product is then unloaded at customer's dock. Guarantees ISPM 15 compliance if no other solid wood packaging is present.

A paper pallet program's success will be influenced by many other factors within the manufacturing, storage and distribution environment. We have the technical experience required to implement a successful paper pallet program. Contact us today for a project consult.
